## Treball autònom 9

a) Indica la derivada  $\frac{dv}{dt}$  en  $t_1=2s$  ,  $t_2=6s$  ,  $t_3=12s$  ,  $t_4=18s$  ,  $t_5=22s$  ,  $t_6 = 30s$  .

$$\frac{dv(t_1)}{dt} = \frac{20 V}{4 s} = 5 \frac{V}{s}$$

$$\frac{dv(t_1)}{dt} = \frac{20 V}{4 s} = 5 \frac{V}{s} \qquad \frac{dv(t_2)}{dt} = \frac{5 V}{6 s} = 0.83 \frac{V}{s} \qquad \frac{dv(t_3)}{dt} = \frac{0 V}{6 s} = 0 \frac{V}{s}$$

$$\frac{dv(t_3)}{dt} = \frac{0V}{6s} = 0\frac{V}{s}$$

$$\frac{dv(t_4)}{dt} = \frac{5V}{4s} = 1,25\frac{V}{s}$$

$$\frac{dv(t_5)}{dt} = \frac{-5V}{6s} = -0.83\frac{V}{s}$$

$$\frac{dv(t_4)}{dt} = \frac{5V}{4s} = 1,25\frac{V}{s} \qquad \frac{dv(t_5)}{dt} = \frac{-5V}{6s} = -0,83\frac{V}{s} \qquad \frac{dv(t_6)}{dt} = \frac{-25V}{6s} = -4,167\frac{V}{s}$$

b) Calcula el corrent i per  $t_1$  a  $t_6$  , amb  $C=1\,mF$  .

$$i(t_1) = C \cdot \frac{dv(t_1)}{dt} = 0.01 F \cdot 5 \frac{V}{s} = 0.05 A$$

$$i(t_1) = C \cdot \frac{dv(t_1)}{dt} = 0.01 F \cdot 5 \frac{V}{s} = 0.05 A$$
  $i(t_2) = C \cdot \frac{dv(t_2)}{dt} = 0.01 F \cdot 0.83 \frac{V}{s} = 0.0083 A$ 

$$i(t_3) = C \cdot \frac{dv(t_3)}{dt} = 0.01 F \cdot 0 \frac{V}{s} = 0 A$$

$$i(t_3) = C \cdot \frac{dv(t_3)}{dt} = 0.01 F \cdot 0 \frac{V}{s} = 0 A$$
  $i(t_4) = C \cdot \frac{dv(t_4)}{dt} = 0.01 F \cdot 1.25 \frac{V}{s} = 0.0125 A$ 

$$i(t_5) = C \cdot \frac{dv(t_5)}{dt} = 0.01 F \cdot (-0.83) \frac{V}{s} = -0.0083 A$$

$$i(t_6) = C \cdot \frac{dv(t_6)}{dt} = 0.01 F \cdot (-4.167) \frac{V}{s} = -0.04167 A$$
